

Test & Measurement

- Source Measure Units
- Signal Generators & Analysers
- DMMs, PSUs, LCR Meters
- Oscilloscopes
- Probing Solutions
- Data Acquisition

Do your equipment suppliers really understand your applications?

Dealing with people who are interested in what you are trying to address and who understand your application is invaluable. At Lambda Photometrics we pride ourselves on having straight forward discussions to ensure you get the right equipment for your requirements. We appreciate you may also need a demonstration before you buy.

Lambda supplies a broad range of electrical and electronic test equipment. Whether you are performing resistance measurements on exotic materials or characterising complex semi-conductor devices, Lambda has the expertise to help you source the right solution.

Perhaps you are working in a production or R&D environment and need to recover signals from a noisy environment, where a lock-in

amplifier will help, or you need precise triggering to control optical measurements, then a delay or pulse generator is needed. For signal analysis in the time and frequency domains, we can supply equipment from the audio to GHz range.

Whatever your Test and Measurement needs, contact Lambda who will give quick and honest advice about where we can be of value.

Why Lambda?

- Qualified Engineers and Scientists who understand your applications
- Comprehensive product range for measuring from DC to Light, many for immediate delivery
- In-House Services: training, calibration and repair
- Over 40 years industry experience
